

#CiberCOVID19 | #DoNotGetInfectedWithTheMail

Cybercriminals are taking advantage of the coronavirus pandemic to infect computer systems using phishing techniques. Pay attention to the e-mails you receive and the links you access.

In March, the number of phishing incidents in public bodies increased 70% over the previous month.

Supplanted identities:

Phishing topics:

- Good practices to prevent the virus
- Updated reports on the situation (international scope, infected number cases, etc.)
- Analysis of the coronavirus impact on different sectors
- Offers to invest in vaccines and health products
- False health alerts

Contents that are attached in harmful emails:

- Infected files(PDF, Word, etc.)
- Links to harmful websites
- Website links that pretend to be the official website of an organization or institution
